

## 513-TYPE TELEPHONE SET

### IDENTIFICATION AND ASSEMBLY OF PARTS

#### 1.00 INTRODUCTION

The 513-type telephone set is a plug ended, common battery, desk-type, dial telephone set designed for use with various types of data sets (see Fig. 1).

#### 2.00 IDENTIFICATION

2.01 Components of the 513-type telephone set are shown in Table A. Description of telephone set components (ie, handsets, ringers, dials, etc) will be found in sections pertaining to these items.

2.02 The set will be manufactured in light gray only (-61).

#### Test Key (584A)

2.03 The 584A key is a combination turnbutton and pushbutton. For applications of this key refer to sections covering data sets used with the 513-type telephone set.

#### Data Key

2.04 The data key is located on the telephone set switchhook assembly in the same position as an exclusion key and operates in the same manner. Applications of this key will also be shown in sections covering data sets used with the 513-type telephone set.

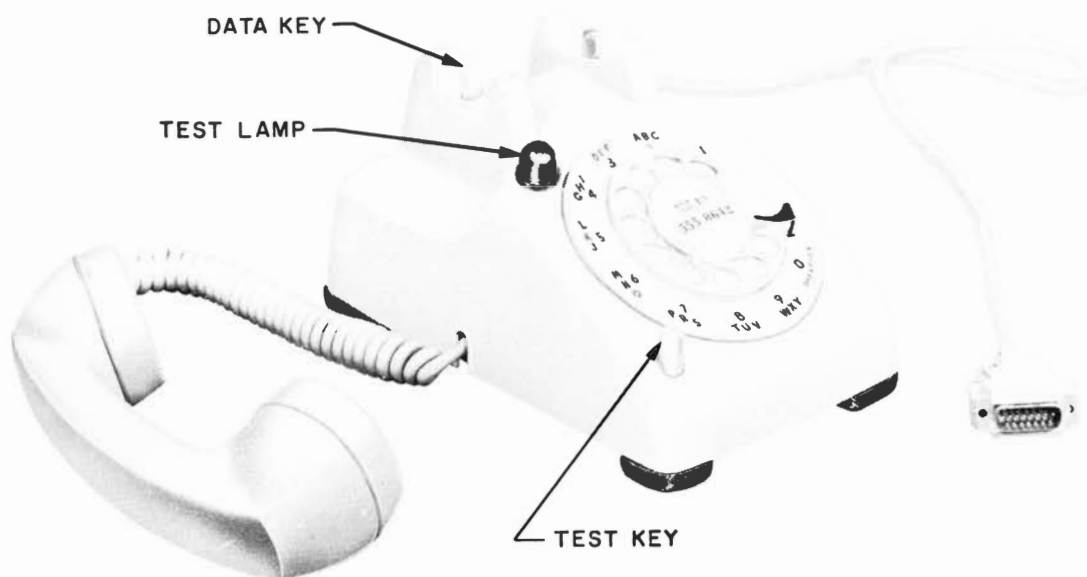

Fig. 1 — 513-Type Telephone Set

- 2.05 For maintenance of this set refer to sections covering maintenance of 500-type sets.
