6650 SOUTH CICERO AVE.
CHICAGO 38, ILLINOIS

December 23, 1947

Gentlemen:

We are pleased to send you the enclosed Kellogg #1000 Series Master-phone Catalog.

This is the first of several new sections to be mailed you, and SHOULD BE PLACED IN YOUR KELLOGG #10 GENERAL CATALOG along with your present Section 6.

Have you reviewed the many features of the Kellogg #1000 Series Master-phone?

If not, by all means do so. Thousands are in service throughout the entire nation.

Because of the ease of installation, maintenance, and the minimum investment in piece parts, many telephone companies are standardizing with Kellogg #1000 Series Masterphones.

These instruments are available for all types of subscribers services. The same basic telephone is used for common battery manual or dial, and also for local and farm line magneto services.

Have you personally used the Kellogg Masterphone on your desk, or in your own home? Once you have done so you will want your subscribers to also benefit by the excellent quality of transmission, reception and ringing offered.

May I suggest that you investigate the possibilities of this telephone in your own plant.

Your order for one or more telephones will receive our very special attention. Our latest price list is enclosed.

Yours very truly,

E. W. Miller, Manager
Apparatus Sales Department

A NEW, EASIER WAY TO
SELECT SWITCHBOARD LAMPS...AND
HOW TO TAKE ADVANTAGE OF
THE MICROMETER ADJUSTMENT RELAY!

Attached, you will find two new Kellogg bulletins which have just been published.

The convenient chart provided on the Tungsten Lamp Bulletin will assist you in ordering the proper switchboard lamp for the particular application for which the lamp is intended. These new coded lamps replace the 24 and 48 volt switchboard lamps shown in the lamp section of the Kellogg catalog.

If you are, at present, using a lamp of another manufacturer, and desire to know the Kellogg equivalent lamp, please advise us the code number and the manufacturer's name of the lamp you are now using.

Also attached, you will find a bulletin describing the new, and recently developed Micrometer Adjustment Pilot Relay. Many switchboards now in service are already equipped with this new relay. The installation of this relay in your Kellogg Switchboard is easily accomplished and assures the most satisfactory and dependable pilot lamp operation.

Very truly yours,

E. W. Miller,
Manager, Apparatus Sales Department

EWM:BR

P. S. The Tungsten Lamp Bulletin is punched to fit directly opposite Page 21, Section 5 in the Kellogg #10 catalog. The Pilot Relay Bulletin is punched to fit directly opposite Page 39, Section 5.
