

ERICOVOX RAPID for V.F. Code Signalling

ERICOVOX RAPID for V. F. Code Signalling

LM Ericsson's loudspeaking telephone, the ERICOVOX, a worthy complement to any basic telephone, is now available with pushbuttons for V.F. Code Signalling.

It is an instrument bearing the same high-quality hallmark as that characterising the ERICOVOX with dial.

Valuable hands-free operation is obtained with voice controlled circuits.

Speech direction is determined by the speaking party.

Very simple to use. ERICOVOX RAPID has only three control buttons:

Line selection — Extra amplification — Microphone cut-out.

ERICOVOX RAPID for V.F. Code Signalling is available in light-grey color.

The pushbutton set, incorporated in the telephone, transmits the V.F. signals according to CCITT-specifications. The following frequencies are used:

| High frequency group | | 1209 Hz | 1336 Hz | 1477 Hz |
|----------------------|--------|---------|---------|---------|
| Low frequency group | 697 Hz | 1 | 2 | 3 |
| | 770 Hz | 4 | 5 | 6 |
| | 852 Hz | 7 | 8 | 9 |
| | 941 Hz | * | 0 | □ |

Numbers can be keyed-in several times faster than they can be dialled conventionally. Calls are more easily set up with pushbuttons than with dials. Especially when long numbers are involved, subscriber greatly value the push-button prestige facility.

Ordering No.: 1/DBE 142 01/2/81 with [S] -button (earth).
