

Central Battery Telephones

CATALOG BULLETIN NO. 4

AUG. 1, 1912

GENERAL

SOME one of the types of central battery telephones listed herein will meet all usual requirements. For special requirements, such as mines, railways, etc., we have special telephones. If, therefore, your needs are not covered by the apparatus described in this bulletin, write us regarding the conditions to be met, and we will give you the desired information.

Western Electric telephones may be relied upon, and give perfect satisfaction. Our valuable and extensive experience in the telephone and manufacturing field, covering a continuous period of over thirty-five years, enables us to offer a complete line which have proved their efficiency and reliability under the most severe conditions.

To-day over 7,000,000 Western Electric telephones are in daily use throughout the world, handling efficiently both local and long distance service. Through successful design, careful construction, and the use of only the best materials, they have ever been recognized as the *high quality telephones*.

Our enormous output enables us to purchase raw materials in large quantities at a low cost. This, together with unequaled manufacturing facilities, makes it possible for us to offer our standard telephones at reasonable prices.

Large and complete stocks are carried by our distributing houses, which are located in twenty-eight principal cities of the United States. This insures prompt filling of orders, together with a saving in transportation, as our prices are f.o.b. the distributing house.

Design and Construction

Cabinets.—The cabinets of all wooden wall telephones are constructed of carefully selected oak or walnut, and are given a durable, attractive finish. Nickel-plated trimmings are used throughout.

A special feature of these telephones is the location of the main binding posts inside the cabinet. This prevents trouble from tampering with the connections.

The backboards of the wall telephones are slotted to permit of the line wires entering either from above or below. All the interior wiring is in cable form, and is made up of differently colored wires to facilitate the tracing of connections.

A **wiring diagram** which clearly indicates the color of the wires and the correct terminal connections is furnished with each telephone.

All the binding posts have screw connections, and all permanent connections are soldered.

Design and Construction (Continued)

Desk Stands.—The desk stands used in connection with our desk telephones have been carefully designed and constructed of the best materials obtainable. They are the result of years of experience, and in their present improved form possess high efficiency, extreme compactness, and attractive appearance. The working parts are held firmly within the upright tube or handle, and by taking out only one screw can be removed as a unit for the purpose of connecting or disconnecting the cords, or for inspection. All parts are of ample size, yet light in weight, and their proportions are such that the desk stand is not easily upset.

The finish of our desk stands is either heavy nickel plate or a special dull finish black japan.

Transmitters.—Western Electric transmitters are uniform in quality, and will retain their efficiency. They have high transmission efficiency over long as well as short lines. They are free from packing, and their battery consumption is low. They are designed to be insensible to extraneous noises which, if picked up, would distort transmission. They can be attached and removed without the aid of a soldering iron.

Receivers.—Western Electric receivers are efficient, compact, and even if subjected to severe usage, require no adjustment after leaving the factory. Provision is made so that dust is prevented from reaching the working parts, and local noises are kept out.

The permanent magnet of our regular bipolar receiver is constructed of the best quality of magnet steel, and is specially prepared to make its magnetic qualities efficient and lasting. The pole pieces are constructed of the best quality of perfectly annealed Norway iron. Particular care is given the annealing process in order that the strength of the magnets can be quickly modified in exact proportions to the fluctuations of the current. Even the most minute variations of the voice are accurately reproduced. The magnet coils are wound with a fine grade of magnet wire. The diaphragm is of ferrotype iron, subjected to enormous pressure to make it perfectly flat so that it will vibrate uniformly over its entire surface and reproduce the exact tones transmitted.

Switch Hook.—The switch hook is very compact and self contained—all its parts being mounted upon a single punched bracket. The lever is short, the circuit contacts are of platinum, and all current carrying parts are insulated from the frame. The springs are mounted vertically to prevent dust from settling upon the contacts.

Condensers.—The condensers furnished for use in connection with our telephones are so designed and constructed that they are sealed against the entrance of moisture, and their electrostatic capacity remains practically constant. Their unusually high insulation resistance of at least 500 megohms per microfarad at the time of manufacture is made possible in so small a condenser by employing only the best grade of paper and foil.

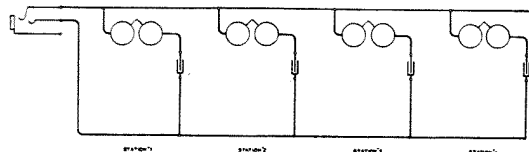

Ringers.—The bells or ringers have a specially loud, clear tone and operate on minimum current. The impedance of our ringers is extremely high, thus making it possible to connect large numbers of telephones on one circuit without interfering with signaling or transmission efficiency. They are so designed that it is almost impossible for them to get out of adjustment. Their construction and arrangement are such that adjustment, when necessary, can be made easily and quickly.

Each ringer, when assembled in the telephone, is equipped with flexible leads and tips for selective ringing connections, whereby the bells at some of the stations can be connected to one side of the line and the balance to the other side without the use of a soldering iron.

Signaling Systems

In the **Single-party system** only one subscriber is connected to a line, the bell at the telephone being bridged across the line in series with a condenser. The signal at the central office is operated by direct current supplied by batteries in the exchange when the subscriber removes his receiver from the hook.

In the **Multi-party code ringing system** several parties can be connected to one line, each bell being connected in series with a condenser and bridged across the line. The line at the central office is wired the same as for single-party line service. One party can not call another on the same line, except through the central office operator, who calls the desired party by a code system of ringing.

Multi-Party Code Ringing. Using Alternating Current

Signaling Systems (Continued)

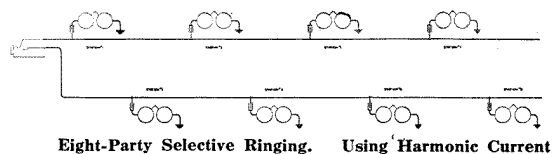

In the **Two-party selective ringing system**, two parties can be connected to one line. In this case, each bell is wired in series with a condenser and connected from one side of the line to ground, one bell from each side of the line. The line at the central office is wired the same as for single-party line service, and the cord circuits are so arranged that alternating current can be sent out over either side of the line by means of a key for each cord circuit, or a master key for all of the cord circuits in a position,

In the **Harmonic selective ringing system** four telephone sets can be bridged across the circuit, or eight telephone sets bridged to ground, four from each side of the line, and all telephones rung selectively. Selective signaling is secured by properly tuning the ringers to operate on different frequencies. Four frequencies at a constant voltage are used: $16\frac{2}{3}$ cycles, $33\frac{1}{3}$ cycles, 50 cycles, $66\frac{2}{3}$ cycles.

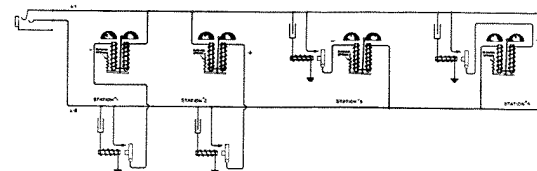

The ringers are of exceptionally high efficiency and all are closely and accurately tuned, but with a sufficient margin to meet the variations of operating conditions.

The gongs are accessible for adjustment, and their adjusting mechanism can be rigidly locked in place. A screw driver is the only tool necessary.

In the **Four-party selective ringing system** using superimposed current, four parties can be connected to one line and any one called without ringing the other bells. The line is equipped with four high impedance relays, two being connected in series with condensers between each side of the line and ground.

Eight-Party Selective Ringing. Using Harmonic Current

Four-Party Selective Ringing. Using Superimposed Current

At each station a biased ringer is connected across the line through the normally open contact of the relay.

The cord circuit at the central office is so wired that the operator can ring over either side of the line with superimposed current of either polarity. When current is applied to one side of the line, the two relays connected to that side respond and connect the two corresponding ringers across the circuit.

As the operator rings only on one side of the line with superimposed current of only one polarity, one bell only will sound.

CENTRAL BATTERY TELEPHONES

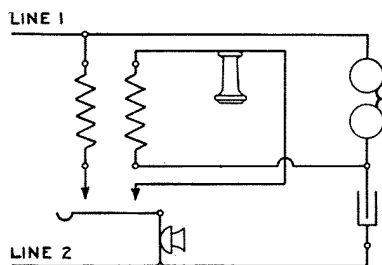

Fig. 1.
 Circuit of Induction Coil Type
 Central Battery Telephone Set

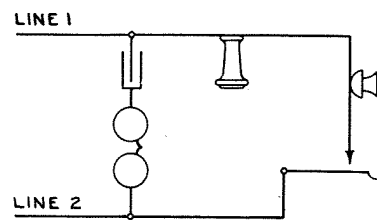

Fig. 2.
 Circuit of Series Type
 Central Battery Telephone Set

We supply two general types of central battery telephones. One type, known as "induction" coil sets, is equipped with an induction coil, and wired as shown in Fig. 1. The other type, known as "series," is not equipped with an induction coil, but instead, its transmitter and receiver are wired in series as shown in Fig. 2. The receiver used with the "series" type does not have a permanent magnet and is therefore referred to sometimes as a "direct current" or "magnetless" receiver.

For practically all ordinary service the series sets will be found entirely satisfactory. Where the highest grade of long-distance service is required, however, the induction coil set should be employed, as the booster effect due to the relation of the induction coil and condenser is of very material aid in increasing transmission.

----------	-------------	------------

No. 1293-A. Short Wall Type

- | | | |
|--------|--|--------|
| 1293-A | Compact wooden wall telephone. Includes 1 No. 8-AG 1000-ohm biased ringer, 1 No. 21-D condenser, 1 No. 143-A switch hook, 1 No. 20 induction coil, 1 No. 3-A transmitter bracket, 1 No. 229-W transmitter, 1 No. 143-W receiver, 1 receiver cord, 1 No. 179 5½" cord | \$9.70 |
| | Same, equipped with No. 122-W or 144-W receiver | 10.05 |
| | Corresponding Desk Telephones, Nos. 6000-A, 6000-AF, 6032-Y or 6032-W, page 5. | |

No. 1294-A. With Writing Shelf

- | | | |
|--------|--|-------|
| 1294-A | Wooden wall telephone with writing shelf. Includes 1 No. 7-AG 1000-ohm biased ringer, 1 No. 21-D condenser, 1 No. 143-A switch hook, 1 No. 20 induction coil, 1 No. 250-W transmitter, 1 No. 143-W receiver, 1 receiver cord | 10.25 |
| | Same, equipped with No. 122-W or 144-W receiver | 10.60 |
| | Corresponding Desk Telephones, Nos. 6000-A, 6000-AF, 6032-Y or 6032-W, page 5. | |

No. 1333-A. Metal Type

- | | | |
|--------|--|-------|
| 1333-A | Compact metal wall telephone with adjustable transmitter. Includes 1 No. 6-AG 1000-ohm biased ringer, 1 No. 21-D condenser, 1 No. 140-S switch hook, 1 No. 20 induction coil, 1 No. 6-A transmitter bracket, 1 No. 291-W transmitter, 1 No. 143-W receiver, 1 receiver cord, 2 No. 329 5½" cords | 9.70 |
| | Same, equipped with No. 122-W or 144-W receiver | 10.05 |
| | Corresponding Desk Telephones, Nos. 6000-A, 6000-AF, 6032-Y or 6032-W, page 5. | |

No. 1333-E. Metal Type

- | | | |
|--------|---|------|
| 1333-E | Compact metal wall telephone with fixed transmitter. Includes 1 No. 6-AG 1000-ohm biased ringer, 1 No. 21-D condenser, 1 No. 140-S switch hook, 1 No. 20 induction coil, 1 No. 297-W transmitter, 1 No. 143-W receiver, 1 receiver cord | 9.10 |
| | Same, equipped with No. 122-W or 144-W receiver | 9.45 |
| | Corresponding Desk Telephones, Nos. 6000-A, 6000-AF, 6032-Y or 6032-W, page 5. | |

FOR HARMONIC SELECTIVE SIGNALING (Continued)

Code No.	Description	List Price each
No. 1333-H. For Harmonic Service. 66 2-3 Cycles		
1333-H	Compact metal wall telephone with adjustable transmitter. To operate on 66 $\frac{2}{3}$ cycles. Includes 1 No. 41-UG 460-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 6-A transmitter bracket, 1 No. 317-W transmitter, 1 No. 171-W receiver, 1 receiver cord, 2 No. 329 6" cords.....	\$9.90
Corresponding Desk Telephones, Nos. 6000-N, 6000-AB, 6032-G or 6032-S.		
No. 1333-J. For Harmonic Service. 16 2-3 Cycles		
1333-J	Compact metal wall telephone with adjustable transmitter. To operate on 16 $\frac{2}{3}$ cycles. Includes 1 No. 41-RG 1800-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 6-A transmitter bracket, 1 No. 317-W transmitter, 1 No. 171-W receiver, 1 receiver cord, 2 No. 329 6" cords.....	10.30
Corresponding Desk Telephones, Nos. 6000-P, 6000-AC, 6032-H or 6032-T.		
No. 1333-M. For Harmonic Service. 33 1-3 Cycles		
1333-M	Compact metal wall telephone with fixed transmitter. To operate on 33 $\frac{1}{3}$ cycles. Includes 1 No. 41-SG 460-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 297-W transmitter, 1 No. 171-W receiver, 1 receiver cord.....	9.25
Corresponding Desk Telephones, Nos. 6000-L, 6000-Y, 6032-E or 6032-P.		
No. 1333-N. For Harmonic Service. 50 Cycles		
1333-N	Compact metal wall telephone with fixed transmitter. To operate on 50 cycles. Includes 1 No. 41-TG 460-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 297-W transmitter, 1 No. 171 receiver, 1 receiver cord.....	9.25
Corresponding Desk Telephones, Nos. 6000-M, 6000-AA, 6032-F or 6032-R.		
No. 1333-P. For Harmonic Service. 66 2-3 Cycles		
1333-P	Compact metal wall telephone with fixed transmitter. To operate on 66 $\frac{2}{3}$ cycles. Includes 1 No. 41-UG 460-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 297-W transmitter, 1 No. 171-W receiver, 1 receiver cord.....	9.25
Corresponding Desk Telephones, Nos. 6000-N, 6000-AB, 6032-G or 6032-S.		
No. 1333-R. For Harmonic Service. 16 2-3 Cycles		
1333-R	Compact metal wall telephone with fixed transmitter. To operate on 16 $\frac{2}{3}$ cycles. Includes 1 No. 41-RG 1800-ohm ringer, 1 No. 21-F condenser, 1 No. 140-T switch hook, 1 No. 297-W transmitter, 1 No. 171-W receiver, 1 receiver cord.....	9.60
Corresponding Desk Telephones, Nos. 6000-P, 6000-AC, 6032-H or 6032-T.		

No. 1333-M-N-P-R

Desk Telephones—Series Type

FOR HARMONIC SELECTIVE SIGNALING

Code No.	Description	List Price
No. 6000-L. For Harmonic Service. 33 1-3 Cycles		
6000-L	Nickel-plated desk stand and wooden desk set box. To operate on 33 $\frac{1}{3}$ cycles. Includes 1 No. 295-AW desk set box containing 1 No. 41-SG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand, comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	\$11.75
Corresponding Wall Telephones, Nos. 1293-AS, 1294-U, 1333-F or 1333-M.		
No. 6000-M. For Harmonic Service. 50 Cycles		
6000-M	Nickel-plated desk stand and wooden desk set box. To operate on 50 cycles. Includes 1 No. 295-AY desk set box containing 1 No. 41-TG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	11.75
Corresponding Wall Telephones, Nos. 1293-AT, 1294-V, 1333-G or 1333-N.		
No. 6000-N. For Harmonic Service. 66 2-3 Cycles		
6000-N	Nickel-plated desk stand and wooden desk set box. To operate on 66 $\frac{2}{3}$ cycles. Includes 1 No. 295-BA desk set box containing 1 No. 41-UG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand, comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	11.75
Corresponding Wall Telephones, Nos. 1293-AU, 1294-Y, 1333-H or 1333-P.		

No. 6000-L-M-N-P

No. 6000-Y-AA-AB-AC

Code No.	Description	List Price each
No. 6000-P. For Harmonic Service. 16 2-3 Cycles		
6000-P	Nickel-plated desk stand and wooden desk set box. To operate on 16½ cycles. Includes 1 No. 295-BB desk set box containing 1 No. 41-RG 1800-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand, comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	\$12.10
	Corresponding Wall Telephones, Nos. 1293-AW, 1294-AA, 1333-J or 1333-R.	
No. 6000-Y. For Harmonic Service. 33 1-3 Cycles		
6000-Y	Same as the No. 6000-L, except that a No. 1020-AH black finish desk stand is furnished instead of a nickel finish stand No. 1020-AG.....	11.75
No. 6000-AA. For Harmonic Service. 50 Cycles		
6000-AA	Same as the No. 6000-M, except that a No. 1020-AH black finish desk stand is furnished instead of a nickel finish stand No. 1020-AG.....	11.75

Code No.	Description	List Price each
No. 6000-AB. For Harmonic Service. 66 2-3 Cycles		
6000-AB	Same as the No. 6000-N, except that a No. 1020-AH black finish desk stand is furnished instead of a nickel finish stand No. 1020-AG.....	\$11.75
No. 6000-AC. For Harmonic Service. 16 2-3 Cycles		
6000-AC	Same as the No. 6000-P, except that a No. 1020-AH black finish desk stand is furnished instead of a nickel finish stand No. 1020-AG.....	12.10
No. 6032-E. For Harmonic Service. 33 1-3 Cycles		
6032-E	Nickel-plated desk stand and metal desk set box. To operate on 33½ cycles. Includes 1 No. 334-J desk set box containing 1 No. 41-SG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	12.05
	Corresponding Wall Telephones, Nos. 1293-AS, 1294-U, 1333-F or 1333-M.	
No. 6032-F. For Harmonic Service. 50 Cycles		
6032-F	Nickel-plated desk stand and metal desk set box. To operate on 50 cycles. Includes 1 No. 334-K desk set box containing 1 No. 41-TG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	12.05
	Corresponding Wall Telephones, Nos. 1293-AT, 1294-W, 1333-G or 1333-N.	

No. 6032-E-F-G-H

Code No.	Description	List Price each
No. 6032-G. For Harmonic Service. 66 2-3 Cycles		
6032-G	Nickel-plated desk stand and metal desk set box. To operate on 66½ cycles. Includes 1 No. 334-L desk set box containing 1 No. 41-UG 460-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	\$12.50
	Corresponding Wall Telephones, Nos. 1293-AU, 1294-Y, 1333-H or 1333-P.	
No. 6032-H. For Harmonic Service. 16 2-3 Cycles		
6032-H	Nickel-plated desk stand and metal desk set box. To operate on 16½ cycles. Includes 1 No. 334-M desk box containing 1 No. 41-RG 1800-ohm ringer, 1 No. 21-F condenser, and 1 No. 1020-AG desk stand comprising 1 No. 20-AG desk stand, 1 No. 291-W transmitter, 1 No. 171-W receiver, 1 No. 418 cord.....	12.40
	Corresponding Wall Telephones, Nos. 1293-AW, 1294-AA, 1333-J or 1333-R.
