20-Button Phone

One phone "handles" as many as 19 lines.

- For economy and efficiency, select the ideal number and "mix" of outside and inside lines serving each phone.

Each line may serve several different phones.

- To meet quickly changing requirements, any convenient phone can be used for central answering.
- And any line can be answered from several different phones.

Available with rotary or TOUCH-TONE® dialing where TOUCH-TONE service is now being offered.

- If TOUCH-TONE service is not yet available in your area, all phones can be changed to accommodate this service when it is available.

These important features are available.

- The status of each line—whether "ringing," "busy," "held," or "idle"—is shown by under-button lamps.
- Hold calls without disconnecting, "handle" several calls at once, transfer calls to another phone, thanks to "hold" feature.
- Ringing volume of each phone is instantly adjustable from loud to soft with the turn of a dial.
- Line combinations can be changed as required to meet changing needs of users or your system.

- Clean, modern design complements any surroundings.

And you can select these optional features for those locations where you want them.

- Talk and listen "hands-free" with speakerphone.
- Add other stations to an outside call through convenient "conferencing" with "add-on" feature.

"Hold" feature and lamps that show status of all lines let one person using one phone handle several calls at once.

Typical system with 20-button phone "handling" calls for 6-button phones.

Hands-free speakerphone is available as an option.
