

This **Practice Index Number 14**, dated June 1984, lists those Practices included in a complete set of current Tellabs technical literature. It replaces Practice Index Number 13, dated March 1983, which should be removed from your Tellabs Practice Catalog binder and discarded. **Practice Index Number 14 will be valid until January 1985.** File **Practice Index Number 14** at the front of your three-volume Tellabs Practice Catalog set.

This Index and your Tellabs Practice Catalog are arranged numerically (by product model number) into nine sections. Within each section, numerical product-model-number order is followed. A star (★) in front of an entry in Index Number 14 indicates a Practice not listed in previous indexes.

Practice section numbers and dates listed in **Practice Index Number 14** reflect the most current literature available on the most current Issue of each respective product. (Section num-

bers and dates are found in the upper righthand corner of the front page of each Practice. The Practice section number corresponds directly to the Issue number of the product covered in that Practice. The Issue level of the product is defined by the second digit of that number, i.e., an "824411A" is an Issue 2 model 4411A.) Practices covering earlier Issues of products or covering products that have been manufacture-discontinued or reduced to an additions-and-maintenance-only order status are not listed. **You'll want to retain Practices covering these products if you currently use them. Otherwise, all other previous revisions of Practices (those with an earlier date code than listed) should be discarded.**

Practices on products of special or limited interest are not included in the general Practice Catalog. Use the "Ordering Sheet for Limited Distribution Practices" to obtain practices not included in the general Catalog.
