

Practice Index 17

Effective May 1987

Practice Index 17 lists those practices that make up a *standard* Tellabs Practice Catalog and also those practices that Tellabs designates *limited distribution*. A star (★) preceding a product description indicates documentation on new products released since the previous Index, or documentation for products that previously had no formal technical manuals. Use the enclosed Order Form to order the practices you need. Please note that some practice revisions listed below are pending at the date of issue of this Index and therefore may not yet be in stock. If

this is the case at the time you order, we will send the most recent practice revision(s) available.

Standard-distribution practices are those practices that most of our customers require. Typically, you will not need (or want) all the technical literature listed. In most cases, you'll probably want to order only the new practices marked by stars.

Limited-distribution practices cover products of specialized or limited use. Order those practices that you need.
