

TRANSMISSION ZONING OF CUSTOMER

STATION APPARATUS

1. GENERAL

1.01 This addendum is being reissued to initiate the elimination of zones 2 and 5 from the assignment office records. This issue replaces addendum Issue A, dated, December, 1965.

1.02 The 300 and 5300 type telephone sets are no longer being placed in service. Therefore, the requirement for zone 2 is eliminated. The only zone designation required is zone L.

1.03 The elimination of zones 2 and 5 does not necessitate the removal of this information from the existing records. It will be deleted from the present records through activity. The "TZ" (Transmission Zone) block on the service order need not show any designation unless the location of the station is in Zone L. The zoning of station apparatus is further discussed in Plant Administration Practice V66.102.
