

TELEPHONE SETS—632 AND 1632 TYPES

CONNECTIONS

1. GENERAL

- 1.01** This section covers connections for various service-feature arrangements of 632- and 1632-type telephone sets. It includes terminal board connections in the set, mounting cord and connector cable conductors, as well as their associated plugs and connectors.
- 1.02** This section is reissued to show even-count color codes for the 632-type telephone sets.
- 1.03** The 632- and 1632-type telephone sets are limited use (18-button) rotary and TOUCH-TONE dial sets respectively. They can be used with 1A1, 1A2, and 6A telephone system line circuits or equivalent. They are equipped with a D94A (MD) or a D94B (even-count) mounting cord which prevents use with 1A telephone system circuits.
- 1.04** For connections to 1A1, 1A2, or 6A line and signal circuits, see appropriate section covering these key telephone systems.
- 1.05** For connections to 1A1, or 3A speaker-phone systems, see appropriate sections covering these systems.
- 2.02** The 599B turnbutton key may be used for cutoff control. It must be supplemented in most cases by an auxiliary relay, such as 227A or 17B KTU, to provide more contacts for multiple switching purposes. (See Table B.)
- 2.03** The 12-button 617A signaling key may be used for pushbutton signaling purposes and can be associated with either second or third key modular units. The key is wired to provide a common ground which can serve two working groups when dissimilar voltage or circuit connections are required (Fig. 5).

- Fig. 8A — TOUCH-TONE Dial
- Fig. 8B — 8C Dial
- Fig. 8C — 6L Dial

2. APPLICATION

- 2.01** The 6-line pickup 598A key can not be used in place of a 599A or B key in the left module because mounting cord pairs do not provide for line lamp and lead control in the 6-pickup key position.

Table B — Pickup—Signaling Conversion of Keys

Table C — Connection Table for 599B Key-Turnkey

Table D — Connections for Modular Key Units

TABLE A

TELEPHONE SET CODES AND MODULE ARRANGEMENTS

Telephone Set		Set Equipped With					
		Left Module		2nd Module		3rd Module	
Type	Code	Key	Fig.	Key	Fig.	Key	Fig.
632 and 1632	1	599A	1	598A	2	105B	
	2					598A	
	3					661A	4
	4					617A	6
	5					661A	4
	6	599B	3	598A	2	105B	
	7					598A	2
	8					661A	4
	11	599A	1	617A	6	667 Type	5
	12						
	13	599B	3	598A	2		

Note: Key identification:

105B — apparatus blank.

598A — Six pickup keys.

599A — five pickup keys and hold key.

599B — turnbutton key, four pickup keys, hold key.

617A — twelve signal keys.

661A — used with 1A1 speakerphone (MD).

667 Type — used with 3A speakerphone.

Fig. 1 — 599A Key

TABLE B

**PICKUP-SIGNALING CONVERSION OF KEYS
FROM LOCKING TO NONLOCKING OPERATION**

(See Notes and Change Leads as Follows)

No. of Pickup Keys	No. of Signal Keys Converted From Pickup Keys			No. of Private and Intercom Lines With Common Signal Keys	Key Leads and Terminals of Key Units Involved						
	599A Key	599B Key	598A Key		BK	BR-G	BR-W	R-BL	G-BL	S-BR	*
6					A	A	A	A	A	A	
5			1		A	A	A	A	A	S	
4	1		2		A	A	A	A	S	S	
3	2	1	3		A	A	A	S	S	S	
2	3	2	4		A	A	S	S	S	S	
1	4	3	5		A	S	S	S	S	S	
			6		S	S	S	S	S	S	
5			1	2	A	A	A	†	†	†	SG
5			1	3	A	A	†	†	†	†	SG
5			1	4	A	†	†	†	†	†	SG
5			1	5	†	†	†	†	†	†	SG

Note 1: All key positions are arranged in the shop as pickup positions. To convert a key position from pickup to signaling, remove the P-12A892 screw detail entirely from the plunger at the key position to be converted. Store the removed screws in the base of the telephone set; use friction tape to hold in place.

Note 2: When arrangement for a common signaling key for several private or intercommunicating lines is used, the sixth key of any supplementary key unit is converted to nonlocking and used as the signaling key. The signaling ground from the apparatus cabinet is directed to the S or S1 lead of the lines to be signaled. The automatic cutoff feature of the 1A1 key telephone system cannot be used on a line connected to the common signaling key.

Note 3: When signaling keys are to be provided on any supplementary key unit, the spade tipped leads associated with pickup keys to be used as signaling keys shall be connected to the S terminals associated with the supplementary key unit involved. These S terminals shall be strapped to the SG terminal of TB 1.

Note 4: The ringer shall be connected without the capacitor for private, common, or intercommunicating line signals as required.

* O-BK lead on pin 37 in the second and third key units (Fig. 3 and 4) shall be connected to the signaling ground at the apparatus cabinet.

† When common signaling is required, use a D-161488 connector, or equivalent, to group key leads.

Fig. 2 — 598A Key

TABLE C
CONNECTION TABLE FOR
599B KEY (TURNKEY)

599B Key Cutoff Features	5th Pickup Key			Spade Tipped Lead
	R (R-W)	T (G-Y)	A (G-BL)	(G-BL)
Cutoff station buzzer or bell		To winding of aux relay		Ringer TB 4

Note 1: Where the turnbutton key is used to switch a multiconductor circuit, an auxiliary relay should be provided externally, in which case the leads of the station, buzzer, or bell are connected to the contacts of the relay.

Note 2: Connect battery on winding of auxiliary relay.
