

3A SPEAKERPHONE SYSTEMS

CONNECTIONS

660 TELEPHONE SETS

1.00 GENERAL

1.01 This section shows the connections between the speakerphone components and the 660 telephone sets.

1.02 Fig. 1 shows the connections using a 148A adapter. Fig. 2 shows the connections using a 149A adapter. The adapter is used to extend certain of the mounting cord leads for connection to the control unit. Speakerphone leads do not have to be run in a separate IW cable if length does not exceed 100 feet. Adapter is used if control unit is placed at a different location than station key equipment.

Note 1: For telephone set connections refer to appropriate C section.

Note 2: Use 148A adapter to extend mounting cord leads
as required.

Note 3: Due to the lower voltage rating the 2012A transformer is not suitable for connections to control unit.

Note 4: Adapter is not necessary if 55A control unit is in place of 55C unit. Voltage ratings, with ZOLLA trans-former should not be used to power the control unit.

* Insulate cord tip with KS-19147, L1 cord tip insulator same location as station key equipment.

and store.

† Terminals on network.

§ Do not connect corresponding connector cable leads at equipment.

** Connect (V-S) of connector cable to *SG* lead at equipment.

ment. Spare terminals on 36A control unit.

INTERNAL STRAP

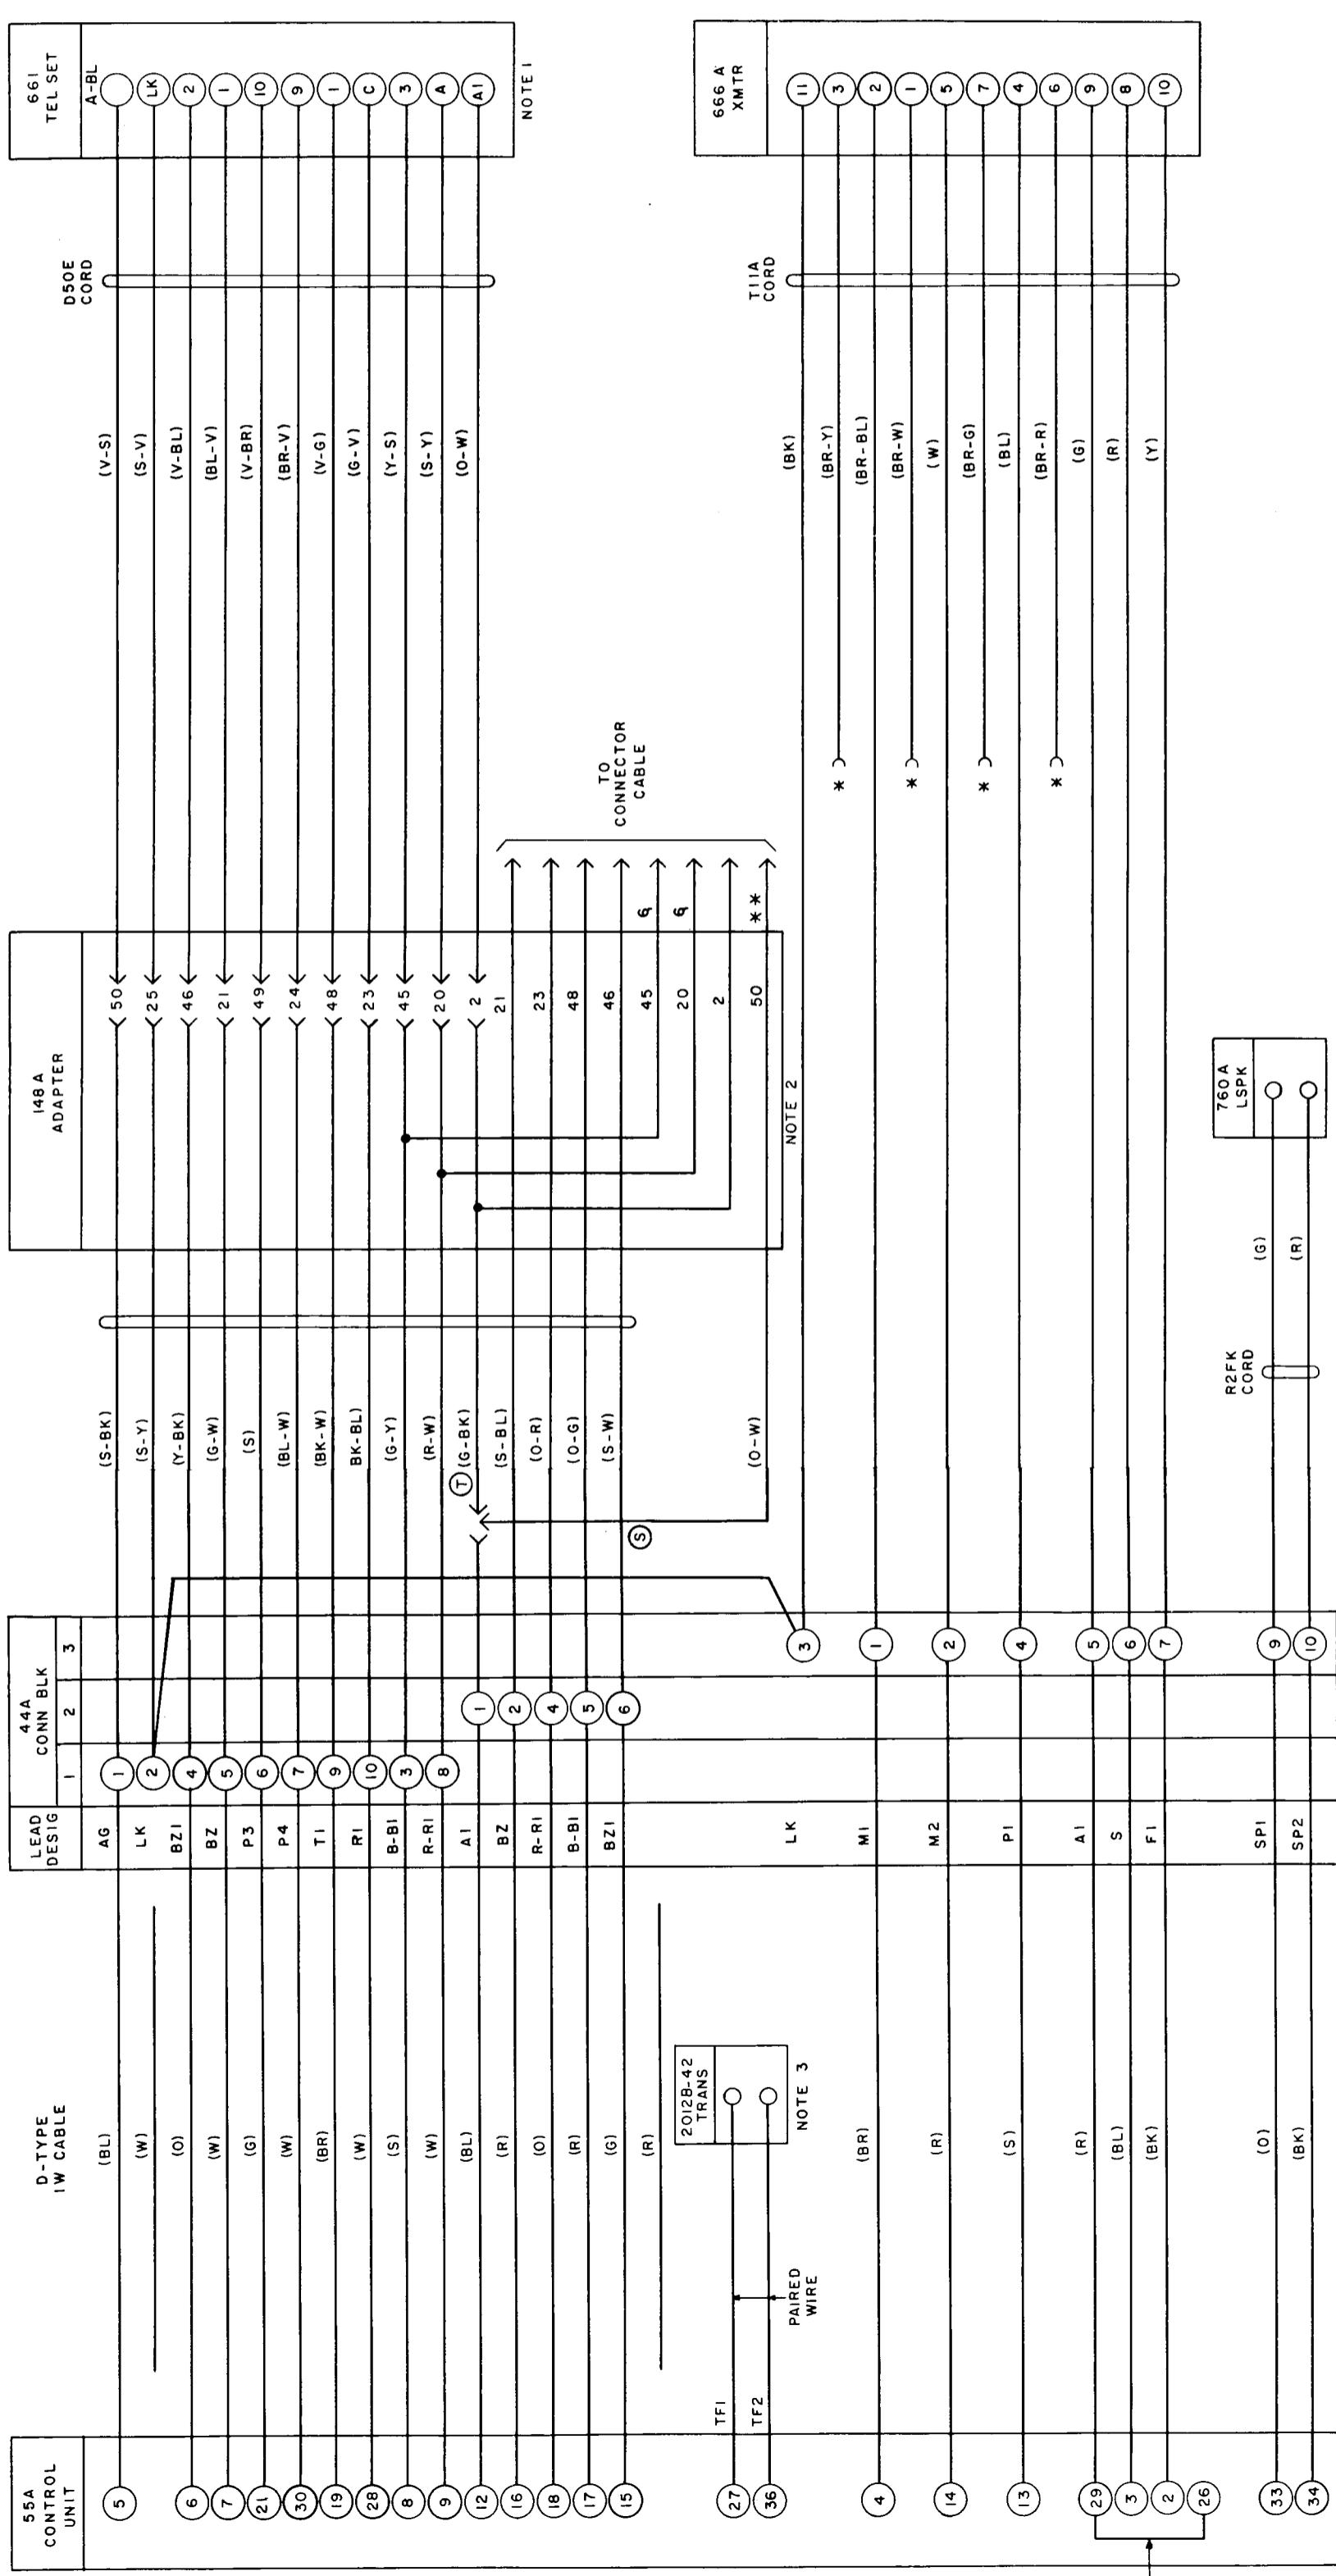

(S) 1A key telephone system with speakerphone on 1st

pickup key. Connect Y lead in telephone set to SG terminal on TBI.

T 1A key telephone system with speakerphone on 2nd through 6th pickup keys. Connect YY lead in tele-

phone set to A1 terminal on TBII.
