RECORDER CONNECTOR CONNECTIONS 50-TYPE

1. GENERAL

1.01 This section covers connections of the 50-type recorder connector to one subscriber line, and to the subscriber station apparatus. It also indicates, as shown in Fig. 1, that a plug-ended cable of the recorder must be inserted in a receptacle in the recorder connector, to provide a connection between them. The plug-ended cable is a part of the recorder and is furnished by the subscriber.
