The Message Waiting System... your assurance that telephone messages are conveyed.

Our Message Waiting System is a natural extension of the message-taking process. It's the modern, cost-effective way for your employees to care for telephone messages. Amazingly simple to operate. An economical answer to improved office efficiency.

The Message Waiting System brings you these benefits:

For your secretaries and attendants:

Reduced workload—no longer will they have to deliver telephone messages to employees. They'll have more time to devote to their normal responsibilities.

For other employees:

Time saved—they'll check for messages only when the lamp on their telephone is lighted. That means they won't make needless trips to a central answering point. They gain time, and you gain productivity.

For everyone:

Better communications—employees know when they have messages, so they never forget to check with secretaries or attendants. And persons who take the calls are sure employees receive their telephone messages.

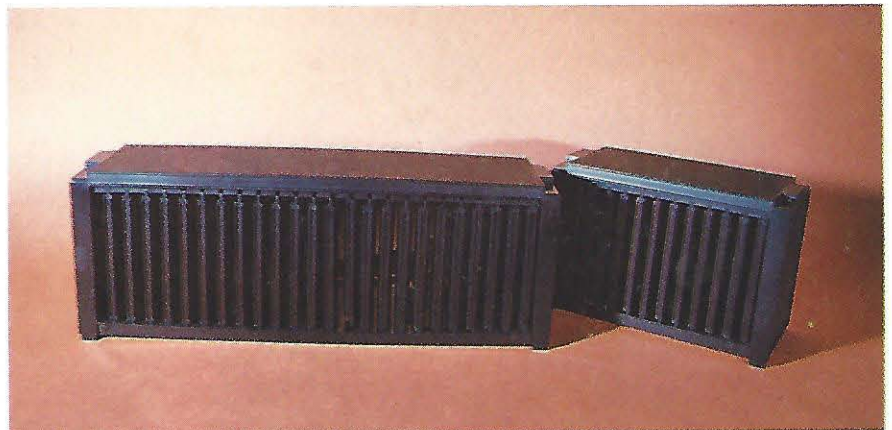

Completely automatic—there's no training involved. As soon as the system is installed, employees can begin using it. There are no buttons or switches to push. The message storage slot is also the signaling device.

Flexibility—since it's a stand alone system, it can be used in a single department or by your entire company. The system can grow as your business grows.

Reliability—you're assured of the same top quality installation and maintenance you've learned to expect from Illinois Bell.

Space efficiency—message waiting cabinets take up minimal space. The 12-slot model is 9 inches wide, the 24-slot 16½. Both are 4½ inches deep by 6¼ inches high.

The Message Waiting System...an economical enhancement of your message-taking function...the time-saver you've been waiting for.

12 slot and 24 slot models
