

com key 1434

a modern business
telephone system
designed for
flexibility, efficiency
and low cost

The Com Key* telephone system allows small and medium-sized firms to select features and options in flexible packages. The basic Com Key 1434 system features up to 14 lines and 34 individual telephones.

Com Key 1434 consoles and telephones come with an ivory colored base; the face plate comes in your choice of seven decorator colors and two wood grain finishes.

The system's attendant telephone is equipped with all incoming lines plus a three-path intercom included in the desk top unit. In addition to this basic telephone, if you wish, you may order either of two auxiliary consoles: the **Direct Station Selection Console** which allows your attendant to signal any individual telephone in the system by pushing a button; or the **Message Waiting Console** which allows your attendant to push a button to activate a lamp on any telephone station to indicate that a call or message is waiting.

Each station in the Com Key 1434 system is a modern, 20 button telephone. Intercom calls can be made directly with these telephones by dialing a simple intercom code; there's no need for attendant assistance. And since each telephone has its own internally mounted speaker, a message can be announced to any telephone location even when the telephone is busy.

The Com Key 1434 system is designed with efficiency in mind. For example, any telephone user can set up a conference call without the assistance of the attendant. But of critical importance is the fact that you save from the start. You get a customized package with just the features you need. Select from these optional features:

- Anyone can use the **Paging** system merely by dialing the appropriate intercom number. Paging operates with wall speakers to locate personnel, reducing callback, wasted steps . . . saving time.
- **Background Music** from your music source can be used with your paging system to provide a pleasant environment throughout your facility.
- When callers must be kept waiting, **Music on Hold** assures them that they haven't been disconnected.
- An instant **Preset Conference on Intercom** is easily established, connecting a station with up to five other preselected stations. No attendant assistance is required, saving time and simplifying individual and group communications.
- **Ring Transfer** switches incoming call ringing to an alternate telephone for coverage during breaks, lunch or after-hours.
- Your outside calls are completely private when you have the **Privacy** feature, unless you choose to use the **Privacy Release** button to permit others to participate.
- A commercial power failure doesn't "knock out" your communications system. **Power Failure Ringing** assures you that incoming calls will ring.
- Selected telephones can be deprived from dialing outside calls with **Station Restriction**. Incoming and intercom calls are not affected.

Standard on all telephones are pushbuttons for all incoming lines. These pushbuttons are lighted to show the status of each line, whether idle, in use, ringing, or on hold. In addition they "pop up" automatically whenever a call is terminated to avoid unintentional interruption on a later call. There are even distinctive sounding tones for incoming and intercom calls.

That's the Com Key 1434 system. Flexibility for your needs. Efficiency for your business communications. Low cost for your budget.
